Siemens Gamesa bolsters its service portfolio in North America by securing 184-MW, 10-year service deal for two Senvion project sites

- Siemens Gamesa further expands its multibrand servicing footprint with the addition of two Senvion sites
- Ten-year service agreements signed for combined 184-MW sites in North America.

Siemens Gamesa Renewable Energy announces it has signed 10-year service agreements with an undisclosed customer at two sites in North America featuring Senvion MM92-2.05 turbines for a total of 184 MW. Both sites include service, maintenance and warranty agreements with an availability guarantee.

As part of the deal, the company will provide remote monitoring, supply chain access and specialty tooling, design and engineering support, and software updates, while fully utilizing the existing hardware and infrastructure on site to ensure the performance and reliability of the turbines throughout the product lifetime.

“We are pleased to bring our service expertise to these sites. This contract builds on the success we’ve seen outside the Senvion acquisition scope and owning the intellectual property makes SGRE a natural choice to extend the lifetime value of those wind projects and improve the customer’s original business case,” said Juan Gutierrez, Service CEO of Siemens Gamesa Renewable Energy.

Since the acquisition of Senvion’s Onshore European service assets and Intellectual Property (IP) in early January 2020, the company has secured almost 1 GW of service agreements outside of the transaction perimeter in the U.S., Canada, Australia and Europe.

With nearly 72 GW under service globally, including more than 10 GW of multibrand turbines, Siemens Gamesa is a leading service provider in the industry. In North America, Siemens Gamesa provides service and maintenance to wind projects with a total output capacity of 13 GW.

About Siemens Gamesa Renewable Energy
Siemens Gamesa is a global leader in the wind power industry, with a strong presence in all facets of the business: offshore, onshore and services. The company’s advanced digital capabilities enable it to offer one of the broadest product portfolios in the sector as well as industry-leading service solutions, helping to make clean energy more affordable and reliable. With more than 105 GW installed worldwide, Siemens Gamesa manufactures, installs and maintains wind turbines, both onshore and offshore. The company’s orders backlog stands at €31.5 billion. The company is headquartered in Spain and listed on the Spanish stock exchange (trading on the Ibex-35 index).
