1. REFOOD STOP WASTE & FEED PEOPLE. LISBON-TELHEIRAS

Refood Mission: Rescuing food and feeding people, transforming into a more just, caring and sustainable society.

Objective: Allow to increase the quantity of food rescued in the Lisbon area, supporting the continuous yearly increment in the scope of Refood movement in Lisbon and specifically in Telheiras Center.

Main measure proposed:

- Provide an electric and refrigerated van to support the collection and distribution of meals, both diary operation and extraordinary collection in our food providers.
- Provide PPEs to protect the volunteers who collect and distribute food, against C-19 until vaccine comes and a normal health situation is reestablished.
- Bio Packing materials to distribute prepared food.
- Volunteers from Siemens Gamesa could join the Refood centers all over Portugal or even new centers being created outside of Portugal.

2.BOKATAS – FIGHTING HOMELESSNESS

Due to Covid-19 pandemic and the existing measures to stop its spread, most public and private bathrooms and daycentres are closed. Because of this, many homeless people are having issues maintaining a good personal hygiene, since all the public fountains have been turned off too. They are also struggling to access masks and hand sanitizers. And last, but not least, most of them are suffering from solitude.

With this project, BOKATAS would be able to accompany 650 homeless people across Madrid.

The objective of this project is to accompany homeless people and spend time with them with the excuse of giving them a sandwich. We also invite them to our center where they can take a shower, wash their clothes and change their used masks for new ones.

3.PLAN SUMAMOS SALUD + ECONOMÍA

Setting up a massive testing facility with no cost to the users. The objective is to find and isolate COVID positive cases as soon as possible.

A testing center with 4 lanes can perform up to 800 test per day, giving the results back in less than 20 minutes.

Besides massive testing, Plan Sumamos will reinforce tracking through Radar Covid, support CAM's communication efforts and help the most vulnerable segments of the population by providing them with digital equipment (e.g., for kids receiving online education) and helping unemployed people find jobs.

SUMMARY

- **Covid-19 test**
- **No poverty and healthcare**

4. REFORESTATION AND SUSTAINABLE LIVELIHOODS RESPONSE FOR REFUGEES IN KENYA

The main objective of this project proposal is to support refugee population and hosting communities in Kenya by improving access to sustainable livelihoods and environmental recovery. The project will contribute to the restoration of degraded natural areas in the Kakuma and Dadaab camp complex by supporting access to the right to a healthy environment for 413,561 refugees and host communities.

To this end, the strategy followed in this proposal proposes the establishment of green belts and orchards in the fields of Dadaab and Kakuma. In the green belts, native trees will be planted for the production of pasture/fodder, construction material and firewood. Various species of fruit trees will also be planted in the orchards for income generation.

With a contribution of € 40,000, it would be possible to support with 8 irrigation systems, 2,000 fruit tree seeds and drought resistant and 200 kits of agricultural tools.

6. ORLANDO SCIENCE CENTER WIND ENERGY COLLABORATION

As a science museum and educational non-profit, Orlando Science Center is an organization that is responding directly to the inequity of educational experiences felt by many underserved and underrepresented populations in Central Florida. Given the growing poverty rate in our area and our overall understanding of human difference, Orlando Science Center has incorporated two extensive goals in our strategic plan: Be a community resource and remove barriers to participation. We provide grant-funded educational programs both on and offsite in an effort to foster engagement and empowerment of students from underserved communities, Title I schools, and populations historically underrepresented in the STEM industry. The biggest impact we have on our students is connecting them with the world of STEM and preparing them with the skills they need for school, work, and life.

7.READING FOR SOCIAL CHANGE

Vaga Lume's project puts books and reading as fundamental bridges to achieve greater social changes. A methodology based on five pillars:

- to provide the necessary infrastructure for the community libraries such as books and shelves;
- to promote reading aloud mediation training;
- to support the community management to create a sense of ownership to the libraries;
- to treasure local culture by registering the community traditions;
- to promote cultural exchange between different regions in Brazil.

Our primary beneficiaries are children from the communities in the region. These children represent a huge ethnic and geographical diversity that composes the Brazilian national identity, but they are also vulnerable groups which depend on natural resources to survive. Through training and access to literature, we aim to:

- Promote access to inclusive education;
- Empower locals with the necessary tools to develop innovative solutions;
- Develop children's basic reading skills;
- Increase the opportunities offered to rural children.

8.SEGURIDAD ALIMENTARIA PARA LA ZONA ORIENTE DE LA CIUDAD DE MÉXICO

SUMMARY

- **Poor families**
- **No poverty**
- **Continue development: food bank**
- **One shot: Yes**

The general objective is to contribute to the food security of the families that live in the Eastern part of Mexico City, through the installation and operation of a **Food Bank** to distribute surplus food to vulnerable people.

Our performance will be supported by three pillars:

- Provide healthy and sufficient food to those who already had a vulnerable condition and those who, as a result of the health crisis, request food support.
- Promote health and nutrition through awareness-raising on household consumption habits through food guidance and health promotion, monitoring of nutritional status, diabetes, obesity, anemia, among others.
- Promote food production through the installation and operation of urban, community or school gardens for healthy food.
